All of our products are compatible with underfloor heating systems.

S ELECTING YOUR FLOOR

Sheet flooring

Express your personality!

By offering a wide and impressive range of designs, finishes and formats, you can create a floor that's unique to your home and guaranteed to last for years to come.

First, choose the look you like:

- STONES
- WOODS
- ICONIC
- CARPETS

Next, compare the flooring performance attributes with the features and benefits important to you. Progression from one level to the next includes upgrades in design realism, stain protection, and longer warranties.

1

WPC

Wood-plastic composites (WPC) are composite materials made of wood fiber/wood flour and thermoplastic (includes PVC and more) while facilitating optimal processing conditions. Mixed with PVC and wood material, it combines both advantages. Compared with traditional click flooring, it has better occlusion.

WPC Vinyl Flooring Structure

2

LOOSELAY

Quick and easy to fit over most existing hard floors. Quieter than click or laminate. No adhesives in most installations and is 100% recyclable. The most easy solution for renovations.

Looselay Flooring Structure

- 1. UV Coating
- 2. Wear Layer
- 3. Printed Layer
- 4. Middle Layer
- 5. Underlayer PVC Backing

3

VINYL CLICK

Click planks require no special tools, adhesives, or underlayment. Click system ensures that planks come together easily for a durable and glue-less installation. Perfect for basement flooring, if you ever get water, simply pick up the tiles, dry the area out and reinstall. You can also take them with you if you move!

Vinyl Click Flooring Structure

4

SELF-ADHESIVE FLOORING

Self-adhesive flooring is a good product that makes the job of installation a little easier, which is why homeowners love it. Installing it is more or less like installing other vinyl tiles, except that you have no adhesive.

Self-adhesive Flooring Structure

5

DRYBACK FLOORING

It goes without saying that vinyl is also an easy to live with flooring. Its great resistance to stains, marks and moisture makes it an ideal choice for easy maintenance. Save time on cleaning to spend it with your family!

F AQ

What is vinyl flooring?

Vinyl flooring, also known as resilient flooring because of its memory (ability to bounce back), was developed for lasting performance, to withstand heavy traffic and for easy maintenance (it is very easy to clean). Vinyl flooring offers many options. It is available in sheets or in tiles. It can be made to resemble other materials like stone, ceramic tile or hardwood. It can be designed to present a variety of looks, including checkered, deco, retro, traditional, or upscale contemporary.

What are the advantages of vinyl flooring?

Vinyl flooring is good looking, affordable and versatile. It is appropriate to use vinyl anytime you want to cover more square footage at a more economical cost. It typically is available in large sheets. Therefore, a vinyl floor can be installed with few seams. Quality vinyl flooring is durable, is not affected by surface moisture (like hardwood flooring), is stain resistant, and can look good and last for decades. It is relatively easy to clean and maintain.

What are the disadvantages of vinyl flooring?

Vinyl flooring often uses water-soluble adhesives and is not recommended for areas that may be exposed to water for an extended period of time. Vinyl flooring can be ripped or gouged by sharp objects and if so, they cannot be fully repaired (sometimes the damage can be hidden or covered). Vinyl floors are not the ideal choice for areas that receive a lot of sunlight. Direct sunlight can cause their color to fade.

What does "no-wax" flooring mean in terms of floor maintenance?

No-wax means your floor has a factory applied coating which does not require buffing or waxing. We recommend vacuuming or sweeping regularly, and washing as needed with floor cleaner.

What is the average lifetime of a vinyl floor?

The lifetime of vinyl flooring varies widely because differences in the quality of the product greatly impacts its longevity. Vinyl flooring generally lasts from five to 30 years. How well you care and maintain your floor will also impact how long it lasts.

Can sunlight fade the color of vinyl flooring?

Yes, all vinyl floors are likely to fade in the constant rays of direct sunlight. Closing your window blinds or drapes on sunny days will help protect your vinyl flooring.

Color & Pattern Reproduction

We are careful to make sure our brochures are accurate and printed to very high standards, but photography and printing cannot always create a perfect representation of our products. For this reason we strongly recommend that you look at a sample of any product you are considering before placing your order.
